## Boise State chooses Brock as underlayment for Bronco Stadium

BOISE, ID — Citing player safety and performance as the key factors in the decision, Boise State University has selected Brock Performance Base as the underlayment for the Broncos' upcoming new synthetic turf field. Field installation is slated for this summer to ensure the new surface is ready for play in time for the Broncos' football season this fall.

“We are very excited to be partnering with Boise State and providing Performance Base for their upcoming field,” says Brad Bricker, VP of Sales and Marketing for Brock International. “Performance Base was designed to deliver the true potential of a playing surface – allowing for performance, safety, drainage and environmental benefits not possible with other base systems. We are confident the Broncos will have a successful season on their new and improved field.”

## Brock's got your back...

...or at least the pack on it. DeMar Designs has created a state of the art waterproof backpack called The Cortez.

David Demarest, owner of DeMar Designs says “we were looking for a foam that could keep the wearer both cool and dry – and Brock more than fit the bill. The Cortez backpack is probably the best advertisement for the airflow capabilities of Brock that there is.”

The Cortez can be found at [www.demardesigns.com](http://www.demardesigns.com).

Brock has created an entirely new site designed primarily to focus on our athletic field Performance Base product. “Due to strong growth in this segment, there was a demand for easier access to our wealth of technical data as well as a clearer graphic presentation of our awesome capabilities,” says Dan Sawyer, President and CEO of Brock.

Other enhancements include a site search button, e-newsletter sign-up, a BaseWorks-specific section and easy-to-find site map page. Feedback welcome!
